composer.lock	create middlewares, create trait, modified actions	15 days ago
dump.sql	Fix dump.sql	7 days ago

README.md

#Blog project

###this project is a blog with ADH pattern.

For instal and try it :

1. Modif database.dist at .php and enter your information for your database and create a table blog. You have the dump.sql, copy, paste and use the script. For create the bdd.

2. If you use phpstorm you can make php -S localhost:"your port" -t public/ and -d .... if you want.

3. And after if you want a access at the admin interface, you can go to login and use email:admin.local@blog.com, pass 123456789. in admin interface you can put any register user at admin. you can create a new user at the register page. For finish you can use maildev for validate the email link or go in the Database and change email token at null.

4. Enjoy!
